EXP.NO: 3	Write a Servlet program that prints "Hello, World!" when accessed through a browser.
DATE:20/02/2025	

AIM:

To write a basic Servlet program that demonstrates the use of Java Servlets by printing "Hello, World!" when accessed through a browser.

ALGORITHM:

1. Input:

- The user makes an HTTP request (usually by entering a URL) through a browser.

2. Servlet Program Flow:

1. **Create a Servlet Class:**
   - Define a Java class that extends the HttpServlet class.
   - Override the doGet() method, which handles HTTP GET requests from the client (browser).
2. **Handle HTTP Request:**
   - In the doGet() method:
     - Get the **PrintWriter** object to write the response to the browser.
     - Set the response content type to **text/html** .
     - Write the **"Hello, World!"** message to the response.

3. **Compile the Servlet Class:**
   - Compile the Java Servlet file using the javac command to generate a .class file.
4. **Deploy the Servlet:**
   - Place the compiled servlet class file in the appropriate directory of the web application (typically in the /WEB-INF/classes folder).
   - Configure the servlet in the web.xml file of the web application or use annotations.
5. **Access the Servlet via Browser:**
   - Start the **Apache Tomcat** or another servlet container.
   - Access the servlet by entering the appropriate URL (e.g., http://localhost:8080/your-webapp/hello).

Code:

HelloServlet.java:

```
package com.demo; import
java.io.IOException; import
java.io.PrintWriter; import
jakarta.servlet.ServletException;
import jakarta.servlet.http.*;
import jakarta.servlet.annotation.WebServlet;
@WebServlet ( "/hello" )
public class HelloServlet extends HttpServlet { protected void
  doGet(HttpServletRequest request , HttpServletResponse response )
  throws ServletException, IOException {
     response .setContentType( "text/html" ) ;
     PrintWriter out = response .getWriter();
      out .println( "<h1>Hello World from Servlet!</h1>" );
   }
}
```

Output:

Hello World!

Result:

Hence, the Hello World is printed using the servlet.
